GUEST WI-FI

Connection for Your Customers, Privacy for Your Business

A win-win situation for both your customers and your business.

Providing Internet access for customers is a great form of customer service. Better yet, you can offer Internet access for customers while adding a layer of privacy to your network. That's where DQE's Guest Wi-Fi comes into play. DQE's Guest Wi-Fi is a turnkey service that includes an access point(s), switch, and DQE internet connection. The access point(s) will grant Internet access for your customers, separate from your business' primary network. This will help safeguard your network, while your customers happily surf the web.

DQE's Guest Wi-Fi Features
