

SD-WAN

Gain control of your network

Augment your Data Network

DQE Communications can now provide SD-WAN (Software Defined - Wide Area Network) as a managed service to your existing data network strategy. No need to change your underlying connectivity as SD-WAN is an overlay to your current network. It is a flexible and scalable way for you to manage your network traffic across multiple sites, to cloud services or off site data centers and securely support application growth.

Let DQE manage your network while you focus on your business!

Features of SD-WAN Managed Service

- Customizable, turnkey solution
- 10Mb to 10Gb over various transport technologies
- Application, performance & network visibility
- Assigned Solution Architect
- Path conditioning (FEC/POC/QoS) insures private line-like performance
- Load balancing & link bonding provide extreme reliability
- Dynamic multi-path control (packet based routing) real time traffic steering over broadband or MPLS
- Business intent overlays (BIO's)
- Zero touch provisioning (ZTP)
- Virtual appliance is supported

Benefits of DQE's SD-WAN Managed Service

- Flexibility - use your existing access (BYOBw) to augment DQE provided services
- Single point of contact with 24x7x365 NOC support
- Supports remote locations outside of DQE's footprint
- Tailored bandwidth options
- Centralized network management
- Online web portal for customer visibility & control
- Reliable, secure service provisioning
- Improved application performance
- Business agility to adjust to market dynamics
- Next business day equipment replacement with onsite sparing available
- DQE monitors & manages software updates
